

STRAPPING / WRAPPING  
TECHNOLOGY

## Twinpack

The favourable introduction to complete transport load securement.

The favourable introduction to complete transport protection

- **Two in one**  
Two types of transport protection combined in one machine.
- **Uniform packaging**  
The packaging machine greatly improves pack presentation consistently, packaging your product every time.
- **Strapping or Wrapping**  
The customer determines the type of load protection by using the appropriate programme pre-selection (in line with the product).
- **Strapping and Wrapping**  
Application and variable tensioning of the strap using the Cyklop CFH 1 sealer head makes optimal transport load protection possible. The customer frequent demands for a second type of protection calls for the TwinPack. The load may be strapped, protecting it during transport, and wrapped, protecting it against dust and damp, in one operation.
- **Strapping made easy**  
The associated problems of manual strapping and sealing disappear. The pallet is placed on the turntable, the strapping cycle is started via push button. The machine automatically straps the load according to the pre-selection.
- **Timesaving**  
Valuable time is saved due to automation in this area. The operator only moves the pallet once. The number of secured pallets per hour rises considerably.
- **Cost optimisation**  
Lowering costs by using the optimal transport load protection or packaging.

What is the Twinpack?

TwinPack brings together the attributes of Cyklop's acclaimed XP112 MVB vertical strapping machine and the GL215 powered pre-stretch wrapper to offer the ultimate solution in load securement for your palletised loads. The twin pack has a central control, which ensures the optimal operation of the installation. Equipped with the high tension strapping head CFH-1, TwinPack reaches the optimum omsnoeringsresultaat.

The combination of the two techniques makes the TwinPack an indispensable aid to everyday despatch. The TwinPack allows many combinations of packaging options.

The stretch wrapper provides the following wrapper programs:

1. Economical wrap
2. standard wrap
3. Rainproof wrapping

The strapping machine offers the following programs:

1. Double strap, longitudinal
2. Double strap, transversely
3. Quadruple strapping (longitudinal and transverse) cross

The stretch and strapping programs are used together in combination to suit the customers exacting requirements.
